

Prescriptive Grazing for Vegetation Management in Natural Landscapes Webinar

Targeted or prescriptive grazing can be defined as the use of a specified kind of livestock at a determined season, duration, and intensity to accomplish defined vegetation and landscape goals. The *Prescriptive Grazing for Vegetation Management in Natural Landscapes* project is an ongoing multi-partnership project designed to provide recommendations for land managers, livestock producers, and livestock grazing practitioners involved in implementing targeted grazing programs.

Join us February 24 between 12 and 1pm MST for a webinar which will focus on guidelines for preparing grazing prescriptions specific to targeted grazing programs. The recommended guidelines presented are based on an extensive literature review and interviews conducted by Sue Michalsky of Paskwa Consulting Ltd. and Amanda Miller of Palouse Rangeland Consulting. Sue and Amanda will present the findings and there will be opportunity for questions and input from participants. There is no charge for the webinar but donations are gratefully accepted. Registration is required through the Grassland Restoration Forum website: <https://grasslandrestorationforum.ca/news-events/>

Funding for this event has been provided by the Alberta Ecotrust Foundation.
